have sex  
with men**

# **Inject PrEP to protect?**

The first Pan European study exploring the willingness to use long-acting injectable PrEP to prevent HIV.

**Maastricht University**

# What is the PROTECT Survey?

This online survey was conducted across Europe (Oct 2023 to March 2024) and sought to uncover who may benefit from the innovation that is long-acting injectable PrEP.

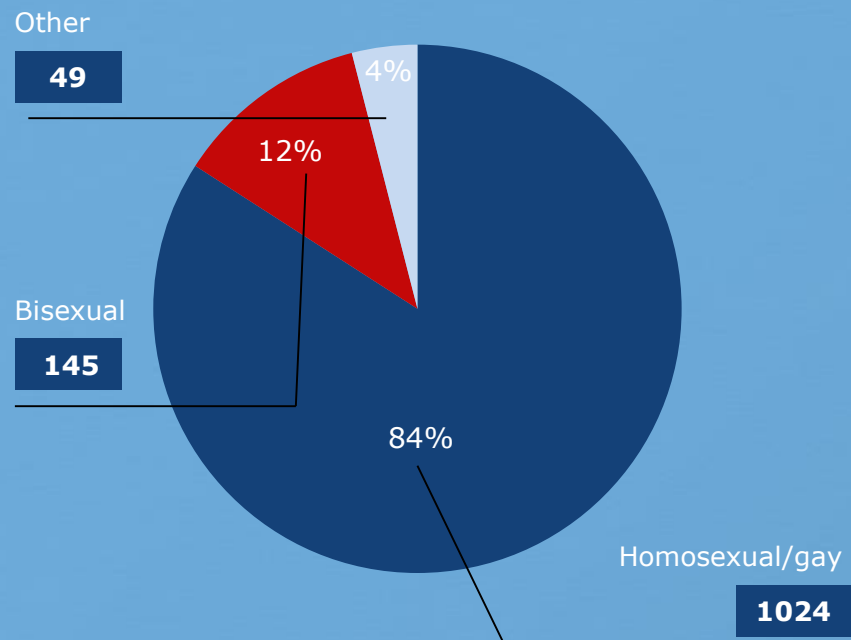

The European Commission (EC) has authorized Apretude ® (cabotegravir long-acting [LA] injectable and tablets) for HIV prevention.

It is important for health services and policy makers to understand who may be interested in taking long-acting injectable PrEP so that resources can be most effectively allocated.

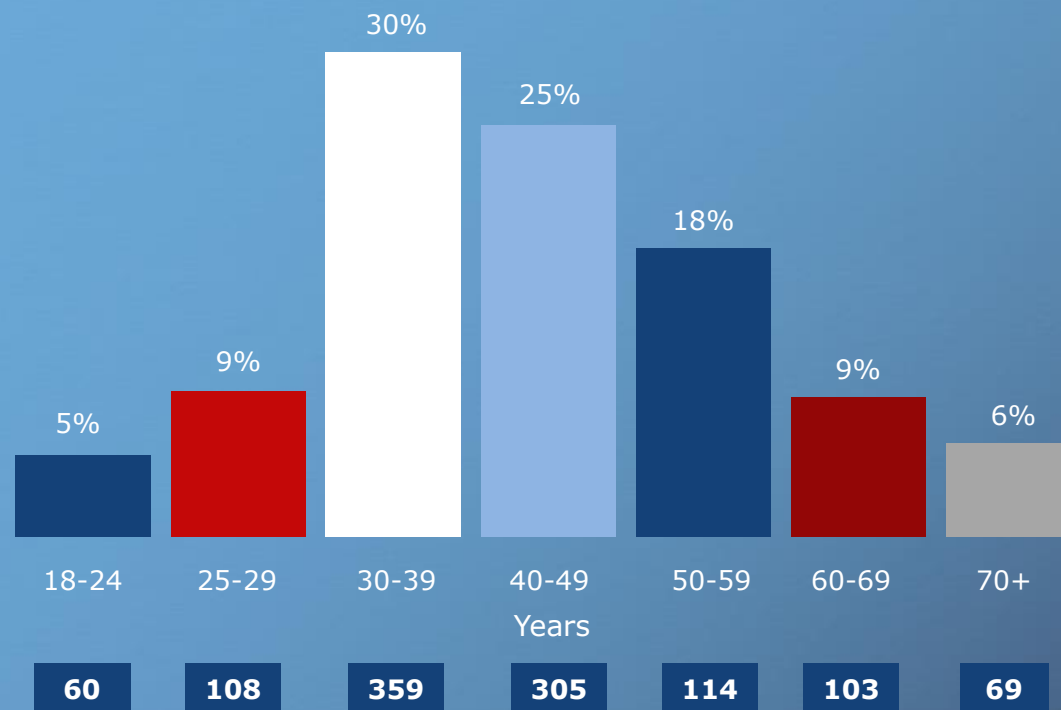

**This factsheet reports on data from the PROTECT Survey collected in United Kingdom from men who have sex with men N= 1218.**

AWARENESS OF ORAL PrEP

CURRENT PREP USERS – ACCESS TO ORAL PREP

# Barriers to oral PrEP use

- **10% of the MSM said:**
  - Oral PrEP was too costly (either the pills or the tests associated with PrEP use)
- **18% of the MSM said:**
  - The procedure took too long to obtain oral PrEP when they needed it
- **15% of the MSM said:**
  - Their healthcare provider did not offer oral PrEP to them
- **17% of the MSM said:**
  - There was a waiting list at their healthcare provider for oral PrEP and the service was not available

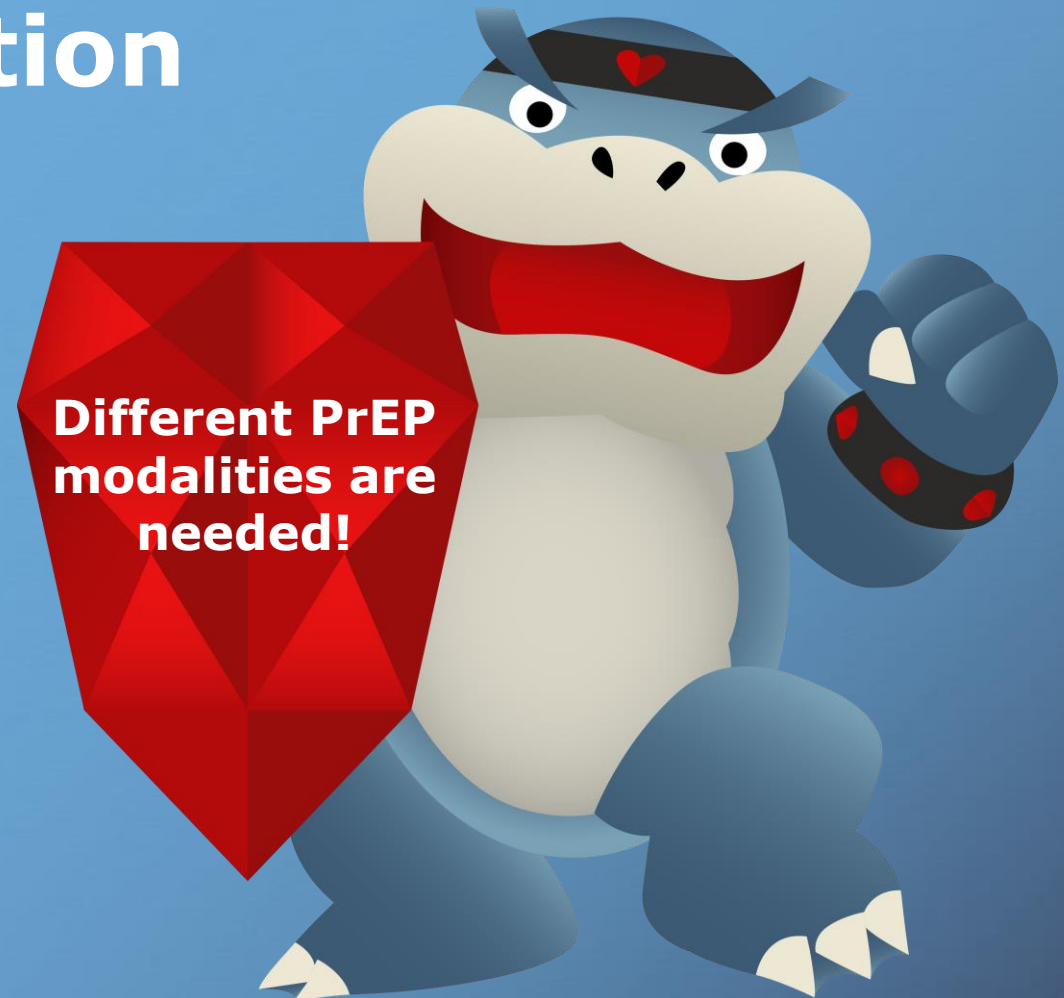

# Long-acting PrEP: interest and intention

**78%**

are interested in using LA-PrEP if it becomes available.

**77%**

intend to use LA-PrEP if it becomes available.

# What LA-PrEP could mean to participants

This word cloud was generated from responses that participants provided to a question asking them what LA-PrEP could mean to them, if it were to become available.

# Summary & Contact Information

## SUMMARY

- British MSM are aware of PrEP and have taken up oral PrEP
- Barriers to starting PrEP still exist
- Interest and intention to use LA-PrEP among MSM in United Kingdom is high
- LA-PrEP may provide an opportunity for greater HIV prevention in United Kingdom
